WORD PROCESSING CASSETTES, MAGNETIC CARDS AND DISKETTES

P Series: High quality cassettes designed specifically for business systems using word processors, automatic text editing typewriters and computer-aided word processing equipment. Manufactured with high-strength polystyrene or ABS with molded corner rollers, pressed slip sheets, perpendicular corner posts, precision tape guides and composite spring foam pressure pads. 1/4 inches of clear leader.

C-1000: Magnetic Cards with writable surface for use with IBM, Xerox, Redactron and Sperry Remington type word processors, automatic text editing typewriters and computer-aided word processing equipment. Manufactured under clean room conditions to ensure card edges free from burrs, oxide flaking and edge curl, and completely erased with a 900 oersted field before shipment.

Floppy Disk FD32/FD65

TEST INSTRUMENTS AND CASSETTES

M-100 Series Cassette Tension Monitor: Makes possible direct measurements of dynamic tape tension within capstan drive and spindle drive cassette transports. It utilizes a special cassette which is instrumented with a strain gauge to measure the tension developed in the following modes; in-feed, take-up, fast-forward, fast-rewind, and stop-start tension in any mode.

M-300 Series Head and Guide Gauge: Designed for use with digital and audio tape cassette transports which conform to American National Standards Institute specifications for information interchange. The M-300 measures the height of the tape guides with respect to the top gauge surface, front-to-back head tilt and the depth of head penetration.

The M-300 Series assures that your cassette drive equipment conforms to ANSI/ECMA and Philips Standards.

M-400 Series Cassette Tester: Tests key parameters specified in ANSI/ECMA BSRX 3.48-1975 Standard. The M-400 tests torque required to wind tape in various modes and pressure pad force in grams at minimum, nominal and maximum head penetration.

X-1000 Series Test Cassettes: Contains 300 feet of computer-grade tape pre-recorded with saturated full-width pulses accurately aligned perpendicular to the tape edge and precisely spaced 800, 1600 or 3200 flux changes per inch. The X-1000 Series is used to test long-term speed accuracy, short-term speed accuracy, head alignment, output level and static and dynamic skew.

DATA STORAGE MEDIA

Better magnetic storage ideas have made ITC world leaders in specialized media and allied test instruments for the data processing and data communications industries.

The first was the development of a line of precision digital cassettes that combined the quality and reliability necessary in the data processing industry with the cost advantages of audio cassette media.

Of almost equal importance was the collateral generation of an extensive variety of special test instruments, test media and extraordinary quality assurance techniques which have contributed in a very material way to the establishment of high industry standards for cassette performance.

Today, ITC manufactures more than half of all the digital cassettes in use, and most of the world's supply of certified word processing cassettes. And every one of them is 100% certified after final assembly.

The same is true of ITC's flexible disks, and every ITC word processing magnetic card is guaranteed to be 100% error free.

Information Terminals Corporation will continue to seek new opportunities for its expertise by anticipating its customers' data storage media requirements and exploring, developing and producing economical efficient and highly reliable solutions.

DIGITAL CASSETTES AND CARTRIDGES

T Series: This benchmark data cassette has achieved worldwide reputation as the industry standard (ANSI and ECMA) against which the performance of all other precision cassettes are measured. More in use than any other digital cassette.

R Series: Less expensive precision certified cassette, also meeting ANSI and ECMA standards.

H Series: The ultimate cassette—designed to operate in extremely hostile environments—65° to 160°F, where performance standard substantially exceeds that of normal usage. Compatible with ANSI, ECMA and ISO standards.

NLT Series: Leaderless design for use in Wang or equivalent programmable calculators. Same high-performance features as T Series.

MI-50 Mini Cassette: New, thumb-length cassette is just 2 inches by 1.3 inches by 0.3 inch, with 50 foot capacity. Features same performance, quality and certification standards found throughout ITC's line of computer grade, high precision cassettes.

TC2000 1/4-inch Data Cartridge: ANSI standard 1/4-inch Data Cartridge provides ITC's premium grade oxide formulations, improved tape guide system and 100% error-free certification. Licensed under all applicable 3M U.S. Patents.

FLEXIBLE DISKS

FD34-1000: Flexible Disk designed for total compatibility and interchangeability with IBM System/32, 3740, 3540, 3770, 3790 or equivalent data storage systems.

FF34-2000: Same as FD34-1000, except specially initialized and certified for data storage on both sides.

FD32-1000: Flexible Disk for systems requiring the 32 sector holes and one index hole around the "inside" diameter.

FF32-2000: Same as FD32-1000, except specially initialized and certified for data storage on both sides.

FD65-1000: Flexible Disk designed for total compatibility and interchangeability with Memorex 651 or equivalent disk drives requiring the 32 sector holes and one index hole around the "outside" diameter.

FF65-2000: Same as FD65-1000, except specially initialized and certified for data storage on both sides.
